X-Bro, Your Own, Personalized International Channel

X-Bro

The entire global community has their eyes fixed on the video clip-sharing which is becoming the new paradigm of the internet service.

Uploading of video clips on the internet and businesses related to such activities are undergoing tremendous growth with the US, Japan, and South Korea leading the movement. With the uprising of the online video clip businesses, many businesses are recognizing a need to convert from existing CGV to PCC. While all the existing equipments only allow the users to be passive receivers of information,

X-Bro is the world's first broadcasting device that empowers the users to become active producers of the information.

Major Features

1. Converts any existing formats of analog video and sound content into a digital format of various qualities.
2. Supports extensive, detailed editing of video and creates caption.
3. Manages schedule of the programs with the schedule management methods used by actual broadcast stations and supports live broadcast (Manages schedule of programs in the timeframe of 24 hours per day for 365 days).
4. Extracts broadcast information from any internet websites.
5. Creates automated VOD database and supports CMS function for each category of the broadcast.
6. Transfers video wireless without a need to access the internet (local broadcasting possible)
7. Provides exceptional DRM (Digital Rights Management System) option.
8. Allows combining media server, web server, and encoding server.
9. Supports remote-controlling of external camera and video player.
10. Compatible with virtually all existing web applications.

The Newest trend Leader of integrated Internet Broadcasting system, "X-BRO"

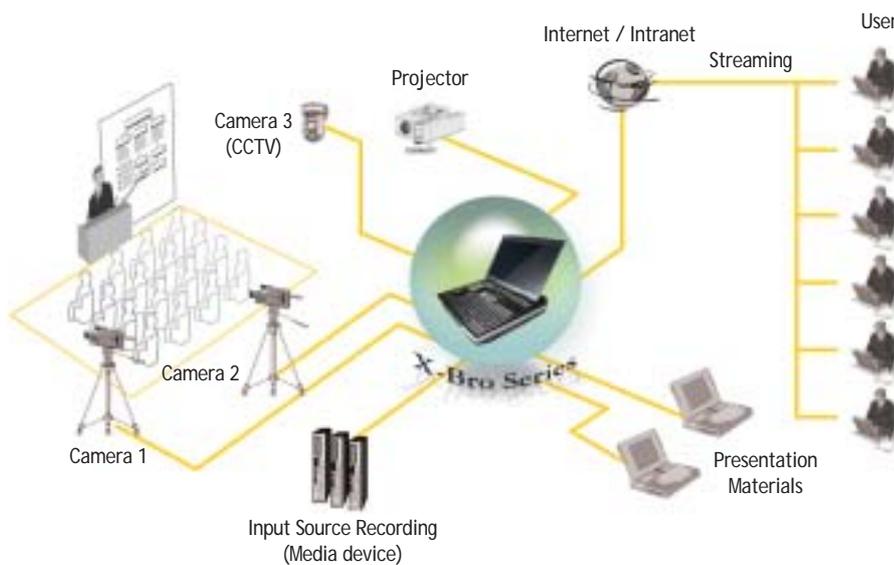

Product Description

Comprehensive internet broadcasting system with exceptional portability X-Bro carries all the essential features of existing high-priced, specialty broadcasting systems. Despite the unparalleled quality of the system, X-Bro comes in super-compact size to provide users with maximized portability and convenience. Users of X-Bro do not need to be experts of the broadcasting systems.

X-Bro is the world's first comprehensive broadcasting system that empowers any individual to initiate an internet broadcast channel through an URL of choice with simple manipulation of buttons.

“X-Bro, A broadcast station on the palm of your hand.”

Example of a System Organization (Creating e-Learning contents for a video lecture)

Internet Broadcast Order with X-Bro

- Step 1. Input analog or digital source to X-Bro
- Step 2. X-Bro converts the data into the internet broadcast format in real-time.
- Step 3. Edit broadcast contents into any layout of your choice.
- Step 4. Set broadcast schedule and URL where the program will be broadcasted.
- Step 5. Start internet broadcasting to the world.
- Step 6. Past broadcasts can be viewed as a VOD using the specific video player for free or as pay for view.
